April 21, 2017

This correspondence provides a status to campus pedestrians and automobile drivers.

**Dates for Activity:** May 1, 2017 to approximately May 3, 2017

**Work Activities:** A small crew will be replacing the heads of light poles in the Northeast Quadrant of campus. The area is bounded by Main St.; Chapin Hall Dr.; Mission Park Dr.; Stetson Rd.; Lynde Ln.; Park St.; and Southworth St. (see attachment below). They will be using one vehicle and a lift.

**Impact to Campus Community:**

- Campus paths may be blocked, adjacent to the light pole being worked on, for a few minutes up to an hour, depending on the condition of the fasteners. There should be no problem walking around the blockage.

- Two parking spaces adjacent to light poles in parking lots will need to be vacant on the day that work is to be done in the lot. Every effort will be made to minimize the number of spaces set aside on any given day to perform the work. Signs and/or barriers will be put in those spaces prior to the start of the work day. The signs and/or barriers will be removed immediately after work is complete to open up parking spaces.

- Noise should be minimal and limited to vehicle and lift engines as well as power tools.
