Office of Planning, Design and Construction

CONSTRUCTION ACTIVITY NOTICE

Replacement of Outdoor Light Pole Heads

April 13, 2017

This correspondence provides a status to campus pedestrians and automobile drivers.

Dates for Activity: April 24, 2017 to approximately June 30, 2017

Work Activities: A small crew will be replacing the heads of light poles with new LED heads across campus. Four separate Construction Activity Notices will be forthcoming with maps attached further defining general quadrant areas and time periods over which work will be taking place (see separate attachment). Work will be performed using one vehicle and a lift.

Impact to Campus Community:

- Work will be coordinated around major end of year events, up to and including work stoppage as needed to maximize parking availability.

- Campus paths may be blocked, adjacent to the light pole being worked on, for a few minutes up to an hour, depending on the condition of the fasteners. There should be no problem walking around the blockage.

- Up to two parking spaces adjacent to light poles in parking lots will need to be vacant on the day that work is done in the lot. Every effort will be made to minimize the number of spaces set aside on any given day to perform the work. Signs and/or barriers will be put in those spaces prior to the start of the work day. The signs and/or barriers will be removed immediately after work is complete to open up parking spaces.

- Noise should be minimal and limited to vehicle and lift engines as well as power tools.

- The new lights will only use about a third of the energy that the old lights use.
