June 2, 2017
This correspondence provides a status to campus pedestrians, automobile drivers, faculty and staff within the vicinity of Hollander and Shapiro Halls.

Date of Activity: June 5, 2017

Work Activities: A small crew will be using a bucket lift to reach the roofs of Hollander Hall and Shapiro Hall on Monday June 5th starting around 11:30 am The intent of this work is to better define the scope of solar panel installation on both buildings later this summer. The individuals will be operating within the footprint of these buildings, bounded by Mission Park Drive, Chapin Hall Drive, and Route 2. They may need access to the Northern Parking lot behind Hollander Hall.

Impact to Campus Community:

- Campus paths may be blocked, adjacent to the above mentioned roofs, for brief periods of time, depending on the activities being conducted. There should be no problem walking around the blockage.

- The rear parking lot to the north of Hollander Hall may be blocked briefly while equipment is being used to get to the roof.

- Noise should be minimal and limited to vehicle and lift engines.

- Work will be being done in the same vicinity as Commencement Breakdown, making the area slightly more congested for the day.
