Office of Planning, Design and Construction

CONSTRUCTION ACTIVITY NOTICE

Weatherization Study of Fitch Hall

June 9, 2017

Dates for Activity: June 15 & June 16, 2017

Work Activities: A weatherization study will be performed over two days to assess the existing energy use/loss of Fitch Hall. This requires a blower door test and general assessment of the building envelope. During this test there may be periods where fog is transmitted through cracks in the building exterior to determine where air leakage is occurring. This fog is completely harmless and poses no health hazard nor an indication of a fire in the building.

Impact to Campus Community:

- There will be no impact around Fitch Hall.

- The fire alarm will need to be offline briefly during the fogging process to ensure no smoke detectors are triggered. This should take two hours or less to accomplish and will be coordinated with Campus Security and Operations.
