June 13, 2017

**Impact Area**: Bronfman Science Center, Hoxsey Street, sidewalks near/around Bronfman Science Center, grass area to the north of Spencer and Brooks House.

This correspondence provides an update for the North Science Utility Enabling Project.

**Work Activities**: Utility installation along the north side of Spencer and Brooks House.

**Impact to Adjacencies**:

- Excavation for utility installation to be installed north of Spencer and Brooks House will begin June 14, 2017.
- The work flow is expected to travel west to east (towards Hoxsey Street). All entrances/exits to Spencer and Brooks House will be maintained at all times (though there may be temporary walkways). At some point there will be a need to cross Hoxsey Street, a separate CAN will be sent out for that work.
- Work hours are Monday – Friday, 7AM-6PM. There will be construction noise that is common with this type of utility installation (utilizing heavy equipment). At the moment, no ledge removal is expected, therefore there should not be a time when the noise and disturbance levels are extremely disruptive. A construction fence will be installed in the area of the work, please respect the location and do not enter the site.
