June 28, 2017

**Work Area:** Hoxsey Street, heading west along the construction access road to Stetson Court and work proposed on Chapin Court.

This correspondence provides an update for the expansion of the college electrical system.

**Work Activities:** Manhole/ductbank installation crossing Hoxsey Street, heading west along the shoulder of the construction access road to Stetson Court, then relocating to Chapin Court.

**Impact to Adjacencies:**

- The manhole/ductbank installation is currently crossing Hoxsey Street and will proceed west along the shoulder of the construction access road to Stetson Court. One way traffic is currently being experienced with a police detail, and will continue to be steel plated at night to maintain normal traffic routes during non-construction hours.
- Two way traffic will be maintained along the construction road to Stetson Court and there will be no parking spaces impacted at the Health Center. The Hewitt House drive along Hoxsey Street is closed, but the driveway along Walden Street is accessible.
- **On either July 3 or July 10, work will shift from the Hoxsey Street/construction road area to Chapin Court.** The manhole/ductbank installation will occur within the shoulder of Chapin Court. Access to the rental of North House, East and West will be limited, but this work is being coordinated with the Real Estate Office. One-way traffic will be experienced during working hours for the other rental properties located along Chapin Court.
- The work along Chapin Court is expected to be completed before the end of July.
- There will be temporary fencing installed within the area of work. These fences will be adjusted with the work area accordingly. Please respect the location of this fence and do not enter the site.
