CONSTRUCTION ACTIVITY NOTICE
Public Parking Lot Reconfiguration

September 29, 2017

Public Parking Lot at the base of Spring Street.

This correspondence provides an update for the reconfiguration of the Public Parking Lot.

Work Activities: Start Date for construction

Impact to Adjacencies:

- Construction for the reconfiguration of the public parking lot at the base of Spring Street is scheduled to begin on October 16, 2017.
- Construction will be completed in multiple phases to maximize the amount of parking available during this time.
- At various stages throughout construction, some parking areas and sidewalks have to be closed. Existing drainage structures will be connected to new structures within Spring Street which will create traffic delays.
- Due to many variables that will affect when and how this work is performed, it is expected to take 6-12 months to complete.
- During construction, parking spaces along with the entrances/exits to the parking lot will be impacted. One day you may enter the parking area from Walden Street and the following week/month you may enter from Spring Street. We will do our best to keep everyone notified.
- Noise associated with parking lot construction (back up alarms, ledge removal, excavators and dump trucks) is to be expected.
- More information will be distributed in the coming weeks, including a phasing plan showing the proposed locations of construction.
